# Flexcon PA: The Personal Assistant For Your Central Heating System

## Comfortable and reliable

Your central heating system should always be working. This is all that matters to you, the user. It should remain free from discomfort and problems, so you can sit at home in comfort and warmth. Thanks to new technology, you can now easily rid yourself of a major cause of breakdowns.

Flexcon allows you to see exactly how your heating system is operating. **Connected to a practical app on your mobile phone**, this useful device can inform you if your heating system requires maintenance or if water needs to be added. Optimum failure prevention, so you will no longer have to unexpectedly call a service company on a weekend because your central heating unit suddenly stops working. Flexcon PA provides security, comfort and lower maintenance costs.

Many heating system problems involve the need to add water to the system in order to maintain the pressure in the pipe system. Delay in adding water often causes your central heating unit to shut down because of too low system pressure.

Service companies are all too quickly called when such breakdowns occur, while refilling is a relatively simple operation. People nevertheless often call servicemen in such cases. However, shut-downs due to low water level in the system are generally not covered by maintenance contracts. This results in high charges, including travel expenses of £ 100 per visit and labour costs.

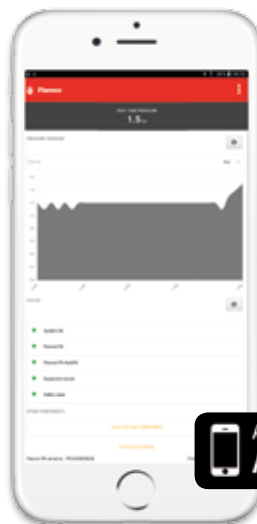

## Advantage of the Flexcon PA

The Flexcon PA immediately rids you of all these problems. It is, in fact, a Personal Assistant for your heating system. A Flexcon PA consists of a smart pressure sensor installed in the proximity of your central heating unit and an app on your mobile phone that displays the sensor readings and recommends actions. One click of a button allows you to view the pressure in your heating system. If it is too low, the Flexcon PA AutoFill begins refilling automatically.

## Benefits of the Flexcon PA

- Prevent nuisance failures.
- Warnings for preventive replacement of parts.
- Direct reporting to service company via the app.
- Minimised maintenance costs over numerous years.
- Optimum comfort.

Additional data is analysed in the app and can be shared with your service company. If necessary, you make arrangements with it to schedule additional maintenance.

## Would you like to know more?

Are you interested in purchasing the Flexcon PA? In that case, contact your service company. It will be able to simply connect the Flexcon PA to your system and tell you how it works. Acquiring a Flexcon PA has only advantages to offer you, ensuring a reliable central heating system with lower maintenance costs.
