

BEST SEPARATION • SAVES ENERGY • LOW MAINTENANCE

Flamcovent Smart Flamco Clean Smart Flamcovent Clean Smart

COMBINING OPTIMAL PERFORMANCE WITH ENERGY CONSERVATION

Get rid of air and dirt

Air and dirt in a system causes problems such as reduced heat transfer, unnecessary faults and wear and noise. But also lead to disruptions of the system and reduced pump performance. Higher energy consumption and an unreliable system are the consequence.

Where do air and dirt come from?

Air particles and gases are always present in the water of heating and cooling systems. They are generally a consequence of activities performed (maintenance, draining and filling etc.), micro-leaks, diffusion and chemical processes in the water.

Dirt is caused by corrosion processes, maintenance to the system or failing system parts. It can accumulate and cause blockages. The use of filters is not ideal because these do not trap smaller particles, silt up, cause high flow resistance, need regular maintenance and require replacement of components.

Air and dirt in a system lead to:

- Shortened system-life due to corrosion.
- Reduced comfort due to less heat transfer and noises.
- Cavitation and magnetite damage pumps.
- Disruptions of the system.
- Loss of image for installers and component suppliers.

With air and dirt separators these adverse factors are reduced as much as possible.

Flamcovent Clean Smart

The new standard

Flamco has the answer

The new Flamcovent, Flamco Clean and Flamcovent Clean Smart air and dirt separator range removes even the smallest microbubbles and minuscule dirt particles from the system water. They are close to maintenance-free and the flow resistance is negligibly low, which saves energy.

The new and proven standard

The Smart air and dirt separators are smart products in every aspect. And just as in other innovations from Flamco, their new technology delivers

optimal performance. Just like the Smart range with connection sizes up to 2", the proven effectiveness makes them future ready and the new standard in air and dirt separation.

Flamcovent Smart

Flamco Clean Smart

Main advantages

- Up to 60% better performance compared to conventional air and dirt separators.
- Extremely low flow resistance resulting in the best energy conservation possible.
- Standard flow velocities up to 3 m/s.
- Consistent performance throughout its service life.
- Low maintenance.

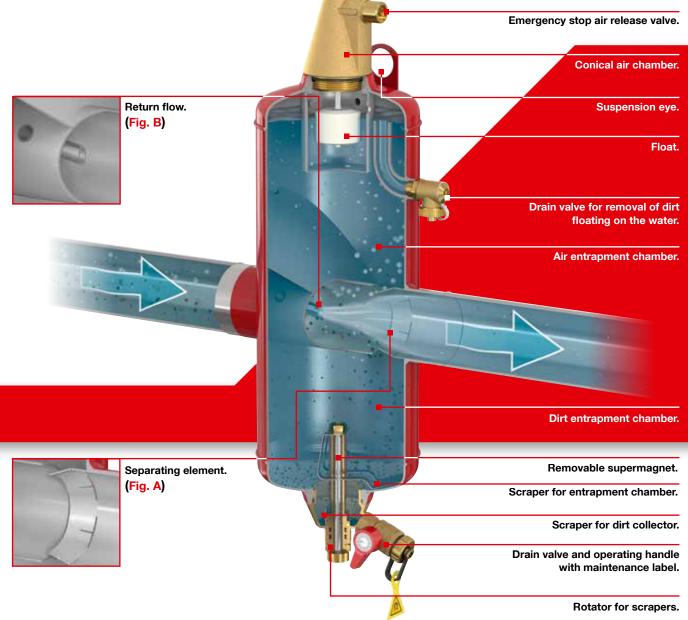

Smart in every regard

High separation performance with energy conservation

The separation element combined with the return flow ensures excellent air and dirt separation and at the same time saves energy because of the negligible flow resistance. An exceptional rate of at least 40% of the air and dirt is separated per cycle while using only 10% extraction of the main flow.

Inside the chamber of the separator the water velocity

is heavily reduced down to less than 1% of the main flow. This efficiently separates microbubbles and dirt particles by allowing the air particles to automatically rise to the air release valve at the top and the dirt particles to sink to the bottom to the dirt collector. A supermagnet additionally contributes in trapping ferrous particles.

Double thrust function

Two thrust functions ensure efficient dirt removal and de-aeration of the system water.

Fig. A: The first function is achieved by the separating element in the path of the main flow through the unit, diverting contaminated water into the entrapment chamber.

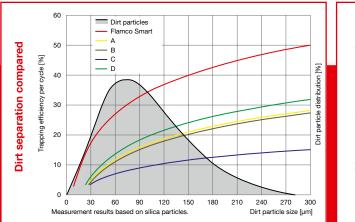

Fig. B: The second effect is achieved by bringing back the clean return flow of water in the centre, upstream of the separating element. This forces the microbubbles and dirt particles present in the main flow outwards and into the chambers of the separator to be removed.

A smart concept

Continuous operation and a long service life

Flamco Smart performs 60% better than conventional air and dirt separators, while the flow resistance has been reduced to a negligible level. This avoids wear to the pump of the central heating boiler and reduces energy costs. The absence of obstructions in the main flow ensures that clogging or blockage is prevented which guarantees superior and continuous operation over its service life. Moreover, this feature also considerably prolongs the service life of the product.

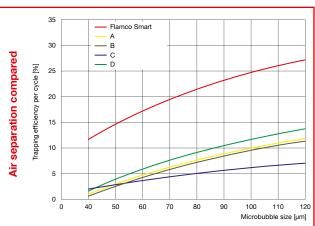

Performs 60% better

Conventional separator with complete flow

through: separation of

at most 25% per cycle.

Supermagnets

25 Neodymium supermagnets are incorporated into the dirt scraper of the Flamco Clean Smart and the Flamcovent Clean Smart. The magnetic rating per magnet is 13,000 Gauss/1,3 Tesla.

The complete flow in the entrapment chamber is directed to pass the magnet. Due to the low flow velocity, the magnets are able to trap even the smallest particles (as small as $4 \mu m$).

By extracting the magnet, the magnetic particles are moved downwards, where two dirt scrapers and the drain valve are situated. This allows for easy and efficient removal of dirt.

Low-maintenance

The low-maintenance characteristic of the air and dirt separators is a great advantage. The renewed technology ensures extended periods between necessary maintenance.

A label can be affixed to the handle of the drain valve that makes it simple to show when maintenance was last performed.

Smart in all details

Conical air chamber

The air chamber of the Flamcovent Smart and Flamcovent Clean Smart is conical in shape and fitted with an elongated float for extra distance to the venting valve. This reduces

the chance of contamination of the valve seat to a minimum. Floating dirt particles collected in the upper entrapment chamber can be drained away

periodically with the drain valve.

Dirt scraper with magnet holder and drain valve

The removable dirt scraper consists of several parts: A double scraper, one for the base of the entrapment chamber and one in the cone of the dirt scraper itself. It has also a magnet holder with supermagnets. By pulling the magnet downwards, the magnetite particles are drawn to the underside of the dirt scraper where they can easily be removed via the drain valve.

The removable magnet is designed to allow a minimum of space below the dirt separator when extracting.

IsoPlus insulation

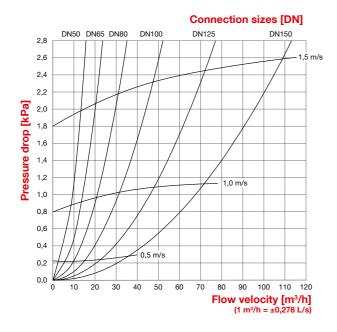

This easy to install insulation set consists of two halves which are joined together by attached hook fasteners and thermoformed deep-drawn covers. The outer polystyrene surface layer (thickness 1 mm) is laminated on the melamine insulation foam (thickness 50 mm).

- Fire class B2, according to DIN 4102.
- Suitable for retrospective installation.
- 100 % recyclable.
- λ-value: 0.035 W/mK.
- Available for connection sizes DN 50 up to DN 200.

Selection and Installation

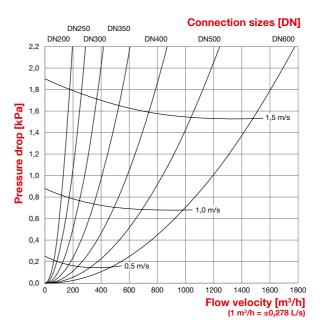

Selection graphs

Thanks to the innovative design of this Smart series of Flamco air and dirt separators the pressure loss in the system is kept to a negligible minimum. Even at flow velocities of 3 m/s, the Smart series deliver the best

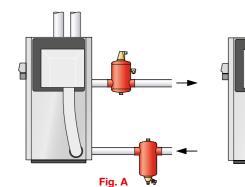

performance in separation and pressure drop on the market.

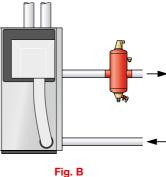

The two graphs below are simple tools for selecting the correct model for your installation.

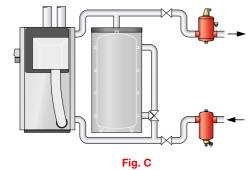

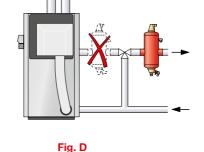

Installation

Depending on the primary function (dirt or air separator), the air, dirt and combined air/dirt separators can be installed in a variety of ways.

Place the product upstream of the boiler in the return line, if dirt separation is the primary function (A, C). If the primary function is air separation (A, C) or a

combined air/dirt separator is being used (B, D), the optimum location is immediately downstream of the boiler or mixing valve, and upstream of the circulation pump. This traps bubbles produced immediately after heating the water. In a cooling system that is just

before the chiller (E).

The separators are manufactured with a G ¾" connection. This enables the connection of any drain line when disposing of captured dirt.

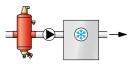

Fig. E

The complete series

Wide product range

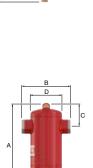

The new air and dirt separators from Flamco are supplied in various connection sizes: DN 50 up to DN 600. Available with welded (S) and flanged (F) connections and with maximum working pressures of 10, 16 or 25^* bar.

Replacement parts

The dirt collector and conical air chamber are available as replacement parts. IsoPlus insulation mantles are also available, for connection sizes up to DN 200.
